presenting the terminology of automotive engineering this book introduces the basic mechanics and analytical methods used in vehicle dynamics the text provides insight into tire force and torque generation and surveys the components of drive train and suspension systems it also covers the fundamentals of vehicle dynamics and includes a tire model as well as dynamic models of force elements using simple vehicle models the author provides a deeper understanding of the dynamics of road vehicles many matlab examples are used to verify theoretical predictions electronic lecture notes and a full solutions manual are available with qualifying course adoption

the solutions manual contains fully worked out solutions to the practice problems in the civil engineering reference manual

this book presents the selected proceedings of the third fourth vehicle and automotive engineering conference reflecting the outcomes of theoretical and practical studies and outlining future development trends in a broad field of automotive research the conference s main themes included design manufacturing economic and educational topics

vehicle powertrain systems the powertrain is at the heart of vehicle design the engine whether it is a conventional hybrid or electric design provides the motive power which is then managed and controlled through the transmission and final drive components the overall powertrain system therefore defines the dynamic performance and character of the vehicle the design of the powertrain has conventionally been tackled by analyzing each of the subsystems individually and the individual components for example engine transmission and driveline have received considerable attention in textbooks over the past decades the key theme of this book is to take a systems approach to look at the integration of the components so that the whole powertrain system meets the demands of overall energy efficiency and good drivability vehicle powertrain systems provides a thorough description and analysis of all the powertrain components and then treats them together so that the overall performance of the vehicle can be understood and calculated the text is well supported by practical problems and worked examples extensive use is made of the matlab software and many example programmes for vehicle calculations are provided in the text key features structured approach to explaining the fundamentals of powertrain engineering integration of powertrain components into overall vehicle design emphasis on practical vehicle design issues extensive use of practical problems and worked examples provision of matlab programmes for the reader to use in vehicle performance calculations this comprehensive and integrated analysis of vehicle powertrain engineering provides an invaluable resource for undergraduate and postgraduate automotive engineering students and is a useful reference for practicing engineers in the vehicle industry
