in an effort to alleviate the perceived growth of a digital divide the u s government enacted a major subsidy for internet and communications investment in schools starting in 1998 the program subsidized spending by 20 90 percent depending on school characteristics using new data on school technology usage in every school in california from 1996 to 2000 as well as application data from the e rate program this paper shows that the subsidy did succeed in significantly increasing internet investment the implied first dollar price elasticity of demand for internet investment is between 0 9 and 2 2 and the greatest sensitivity shows up among urban schools and schools with large black and hispanic student populations rural and predominantly white and asian schools show much less sensitivity overall by the final year of the sample there were about 66 percent more internet classrooms than there would have been without the subsidy using a variety of test score results however it is clear that the

success of the e rate program at least so far has been restricted to the increase in access the increase in internet connections has had no measurable impact on any measure of student achievement

freakonomics is a groundbreaking collaboration between levitt and stephen j dubner an award winning author and journalist they usually begin with a mountain of data and a simple question some of these questions concern life and death issues others have an admittedly freakish quality thus the new field of study contained in this book freakonomics it is true that readers of this book will be armed with enough riddles and stories to last a thousand cocktail parties but freakonomics can provide more than that it will literally redefine the way we view the modern world book jacket

despite the interest in measuring price sensitivity of online consumers most academic work on internet commerce is hindered by a lack of data on quantity in this paper we use publicly available data on the sales ranks of about 20 000 books to derive quantity proxies at the two leading online booksellers matching this information to prices we can directly estimate the elasticities of demand facing both merchants as well as create a consumer price index for online books the results show significant price sensitivity at both merchants but demand at barnes and noble is much more price elastic than is demand at amazon the data also allow us to estimate the magnitude of retail outlet substitution bias in the cpi due to the rise of internet sales the estimates suggest that prices online are much more variable than the cpi which understates inflation by more than double in one period and gets the sign wrong in another
