the 6th international conference on the theory and application of diagrams diagrams 2010 was held in portland usa in august 2010 diagrams is an international and interdisciplinary conference series which continues to present the very best work in all aspects of research on the theory and application of diagrams some key questions that researchers are tackling concern gaining an insight into how diagrams are used how they are represented which types are available and when it is appropriate to use them the use of diagrammatic notations is studied for a variety of purposes including communication cognition creative thought computation and problem solving clearly this must be pursued as an interdisciplinary endeavor and diagrams is the only conference series that provides such a united forum for all areas that are concerned with the study of diagrams for example architecture artificial intelligence cartography cognitivescience computer science education graphic design history of science human computer interaction linguistics logic mathematics philosophy psychology and software modelling the articles in this volume reflect this variety and interdisciplinarity of the field

diagrams is an international and interdisciplinary conference series covering all aspects of research on the theory and application of diagrams recent technological advances have enabled the large scale adoption of diagrams in a diverse range of areas increasingly sophisticated visual representations are emerging and to enable effective communication insight is required into how diagrams are used and when they are appropriate for use the pervasive everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can and do play research in the field of diagrams aims to improve our understanding of the role of diagrams sketches and other visualizations in communication computation cognition creative thought and problem solving these concerns have triggered a surge of interest in the study of diagrams the study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour diagrams 2008 was the 6th event in this conference series which was launched in edinburgh during september 2000 diagrams attracts a large number of researchers from virtually all related fields placing the conference as a major international event in

the area diagrams is the only conference that provides a united forum for all areas that are concerned with the study of diagrams for example architecture, artificial intelligence, cartography, cognitive science, computer science, education, graphic design, history of science, human-computer interaction, linguistics, logic, mathematics, philosophy, psychology, and software modelling. We see issues from all of these fields discussed in the papers collected in the present volume.

Logic, the discipline that explores valid reasoning, does not need to be limited to a specific form of representation but should include any form as long as it allows us to draw sound conclusions from given information. The use of diagrams has a long but unequal history in logic. The golden age of diagrammatic logic of the 19th century, thanks to Euler and Venn diagrams, was followed by the early 20th century's symbolization of modern logic by Frege and Russell. Recently we have been witnessing a revival of interest in diagrams from various disciplines: mathematics, logic, philosophy, cognitive science, and computer science. This book aims to provide a space for this newly debated topic: the logical status of diagrams in order to advance the goal of universal logic by exploring common and/or unique features of visual reasoning.

This book constitutes the refereed proceedings of the 16th International Conference on Conceptual Structures (ICCS 2008) held in Toulouse, France, in July 2008. The 19 revised full papers presented together with 2 invited papers were carefully reviewed and selected from over 70 submissions. The scope of the contributions ranges from theoretical and methodological topics to implementation issues and applications. The papers present a family of conceptual structure approaches that build on techniques derived from artificial intelligence, knowledge representation, applied mathematics, and lattice theory, computational linguistics, conceptual modeling, intelligent systems, and knowledge management.

Semiotics as a Tool for Learning Mathematics is a collection of ten theoretical and empirical chapters from researchers all over the world who are interested in semiotic notions and their practical uses in mathematics classrooms. Collectively they present a semiotic contribution to enhance pedagogical aspects both for the teaching of school mathematics and for the preparation of pre-service teachers. This enhancement

involves the use of diagrams to visualize implicit or explicit mathematical relations and the use of mathematical discourse to facilitate the emergence of inferential reasoning in the process of argumentation it will also facilitate the construction of proofs and solutions of mathematical problems as well as the progressive construction of mathematical conceptions that eventually will approximate the concepts encoded in mathematical symbols these symbols hinge not only on mental operations but also on indexical and iconic aspects which often are not taken into account when working on the meaning of mathematical symbols for such an enhancement to happen it is necessary to transform basic notions of semiotic theories to make them usable for mathematics education in addition it is also necessary to back theoretical claims with empirical data this anthology attempts to deal with such a conjunction overall this book can be used as a theoretical basis for further semiotic considerations as well as for the design of different ways of teaching mathematical concepts
